

COURSE DESCRIPTION FORM

INSTITUTION National University of Computer and Emerging Sciences (NUCES-FAST)

**PROGRAM (S) TO
BE**

BS(CS)

EVALUATED

Course Description

Course Code	CS2001
Course Title	Data Structures
Credit Hours	3+1
Prerequisites by Course(s) and Topics	Object Oriented Programming (CS1004)
Assessment Instruments with Weights (homework, quizzes, midterms, final, programming assignments, lab work, etc.)	Mid-1: 15 Mid-2: 15 Project: 10 Assignments & Quizzes: 10 Final: 50
Course Coordinator	Anam Qureshi
URL (if any)	-
Current Catalog Description	-
Textbook (or Laboratory Manual for Laboratory Courses)	<u>Textbook:</u> Data Structures and Algorithms in C++ 4th Edition by Adam Drozdek <u>Reference books:</u> Data Structures & Algorithm Analysis in C++ Author: Mark Allen Weiss Publisher: Pearson Education Data Structures Using C++ by D. S. Malik

Reference Material	Uploaded on Google Classroom link for the course:																																																																	
Course Goals	<div style="background-color: #f2f2f2; padding: 5px;">A. Course Learning Outcomes (CLOs)</div> <ol style="list-style-type: none"> <i>Use & explain</i> concepts related to basic and advanced data structures and describe their usage in terms of common algorithmic operations [Bloom's Taxonomy Level: 3, Learning Domain: Cognitive] <i>Solve</i> recursive problems efficiently using Backtracking [Bloom's Taxonomy Level: 3, Learning Domain: Cognitive] <i>Compare</i> different data structures in terms of their relative efficiency and <i>design</i> effective solutions and algorithms that make use of them. [Bloom's Taxonomy Level: 6, Learning Domain: Cognitive & Psychomotor] <i>Transform</i> cycling-bearing graphs into acyclic tree structures for minimum cost traversal [Bloom's Taxonomy Level: 6, Learning Domain: Cognitive & Psychomotor] <div style="background-color: #f2f2f2; padding: 5px;">B. Program Learning Outcomes</div> <table border="1"> <tbody> <tr> <td>1. Computing Knowledge</td><td>Apply knowledge of mathematics, natural sciences, computing fundamentals, and a computing specialization to the solution of complex computing problems.</td><td>CLO-1</td></tr> <tr> <td>2. Problem Analysis</td><td>Identify, formulate, research literature, and analyse complex computing problems, reaching substantiated conclusions using first principles of mathematics, natural sciences, and computing sciences.</td><td>CLO-2</td></tr> <tr> <td>3.Design/Develop Solutions</td><td>Design solutions for complex computing problems and design systems, components, and processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.</td><td>CLO-3</td></tr> <tr> <td>4. Investigation & Experimentation</td><td>Conduct investigation of complex computing problems using research based knowledge and research based methods</td><td>CLO-4</td></tr> </tbody> </table> <div style="background-color: #f2f2f2; padding: 5px;">C. Relation between CLOs and PLOs (CLO: Course Learning Outcome, PLOs: Program Learning Outcomes)</div> <table border="1"> <thead> <tr> <th colspan="2" rowspan="2"></th><th colspan="12">PLOs</th></tr> <tr> <th>1</th><th>2</th><th>3</th><th>4</th><th>5</th><th>6</th><th>7</th><th>8</th><th>9</th><th>10</th><th>11</th><th>12</th></tr> </thead> <tbody> <tr> <td rowspan="2" style="writing-mode: vertical-rl; transform: rotate(180deg);">CLOs</td><td>1</td><td>✓</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr> <td>2</td><td></td><td>✓</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> </tbody> </table>	1. 1. Topics to be covered:																																																																													
List of Topics	No. of Weeks	Contact Hours	CLO																																																																										
ADT, C++ Language Specification, Pointers revisited, Rule of Three	1	3	1																																																																										
Recursion, it's types, issues and Backtracking (with examples)	1	3	2																																																																										
List (Singly Linked List), List (Doubly Linked List), List (Circular Linked List)	2	6	1, 3																																																																										
Elementary Sorting Techniques	1	3	1, 3																																																																										
===== Mid-term 1 Exam =====																																																																													
Advanced Sorting Techniques and their issues, Linear, Binary & Interpolation Search	1	3	3																																																																										
Stack, Queue, their implementation strategies and applications	1	3	1, 3																																																																										
Priority Queues, Heaps as Priority Queues	1	3	1, 3																																																																										
Binary trees and their properties (Full Binary Tree, Complete Binary Tree), Multi-way Trees/Tries	3	7	1, 2, 3																																																																										
Binary Search Trees, their operations and applications, skewness and issues																																																																													
===== Mid-term 2 Exam =====																																																																													
Balance in Binary Search Trees, AVL Trees	1	3	2, 3																																																																										
Hashing, Hash Functions, Collision-resolution Techniques, Rehashing	1	3	1, 3																																																																										
Graphs and their representation and traversal, Shortest Path Problem, Minimum Spanning Trees, Graph Algorithms, Topological Sort	2	3	4																																																																										
Revision	1	3																																																																											
===== Final Exam =====																																																																													
Total	16	43																																																																											

Laboratory Projects/Experiments Done in the Course	<p>There will be weekly labs starting from the first week. The following is a summary of the Lab exercises given to Students:</p> <ul style="list-style-type: none"> • Introduction to Data Structures and their implementation. • Writing & using dynamic safe arrays • Solving recursive problems using Backtracking in programs • Implementation of Linked Lists • Linked List based implementation of primitive Data Structures • Implementing Sorting Algorithms • Implementing Binary Trees and writing functions for their properties • Implementing Binary Search Trees using Structures and Classes • Writing functions for tree traversal and maintaining balance • Implementing graphs and writing functions for their traversal 			
Programming Assignments Done in the Course	Assignments related to Linked List and its variants, Recursion and Backtracking, Stacks & Queues, Binary Search Trees and Traversal			
Class Time Spent on (in credit hours)	Theory	Problem Analysis	Solution Design	Social and Ethical Issues
	15	15	13	0
Oral and Written Communications	Every student is required to submit at least __1__ written report of typically __2__ pages and to make __1__ oral presentations of typically __10__ minute's duration. Include only material that is graded for grammar, spelling, style, and so forth, as well as for technical content, completeness, and accuracy.			

Instructor Name: Anam Qureshi

Instructor Signature: _____

Date: January 31, 2022
